

PROJECT DESIGN PHASE – PROPOSED SOLUTION

Date	29 September 2026
Team ID	6ab800af30f9767f87729b97
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

S.No.	Parameter	Project-Specific Description
1	Problem Statement (Problem to be solved)	Institution Details records in ServiceNow need controlled access. Different users should have different permissions, and record visibility should be restricted according to the Branch value. Administrators must retain full access.
2	Idea / Solution description	Implement Script-Controlled Access Control Lists (ACLs) on the custom Institution Details table. The READ ACL evaluates the user's role and Branch-related access requirement. Separate CREATE, WRITE and DELETE ACLs control the corresponding operations using dedicated roles. Administrators are allowed full access.
3	Novelty / Uniqueness	The project demonstrates record-level security by combining role-based ACL evaluation with a Branch-based restriction. It also separates CRUD permissions and validates the result through user impersonation, providing a practical demonstration of controlled access inside ServiceNow.
4	Social Impact / Customer Satisfaction	The solution supports protection of institution/student-related records from unauthorized access. Administrators gain clearer control over who can view or modify records, while authorized users can perform only the operations permitted to them.
5	Business Model (Revenue Model)	This is an academic ServiceNow security project and does not define a direct revenue model. In an organizational implementation,

		the approach can support secure configuration and access-control services within a ServiceNow implementation or consulting engagement.
6	Scalability of the Solution	The ACL approach can be extended to additional branches, roles, tables and access conditions. Additional ACL rules can be configured for new operations or user groups while retaining the same record-level access-control concept.

Proposed Solution – One-line Summary: Use ServiceNow Script-Controlled ACLs to enforce role-based and Branch-based record access for Institution Details while preserving administrator full access.
