

PROJECT DESIGN PHASE-II – SOLUTION REQUIREMENTS

Date	29 September 2026
Team ID	6ab800af30f9767f87729b97
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

A. Functional Requirements

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User and Role Management	Create the EEE test user and configure the required roles (bb1, bb2, bb3, bb4) for access-control testing.
FR-2	Institution Details Table	Create the custom Institution Details table (u_institution_details) with Student Roll Number, Student Name, Faculty Name, Branch, Email, Phone Number and Description fields.
FR-3	Branch-Based READ Access	Restrict record visibility so the configured EEE user can view permitted EEE branch records while unauthorized access is denied; administrators retain full access.
FR-4	CREATE Access	Allow record creation only to users with the configured CREATE permission role (bb2).
FR-5	WRITE Access	Allow record modification only to users with the configured WRITE permission role (bb3).
FR-6	DELETE Access	Allow record deletion only to users with the configured DELETE permission role (bb4).
FR-7	Administrator Full Access	Allow users with the admin role to retain full access to Institution Details records.
FR-8	Access Validation	Validate READ, CREATE, WRITE and DELETE permissions using user impersonation and different role combinations.

B. Non-Functional Requirements

NFR No.	Category	Requirement
NFR-1	Usability	Access behaviour should be understandable to administrators and users through normal ServiceNow lists/forms and predictable allow/deny results.
NFR-2	Security	ACL rules must restrict unauthorized record access and enforce role-based and Branch-based access conditions.
NFR-3	Reliability	ACL evaluation should consistently enforce the configured access rules for supported users and operations.
NFR-4	Performance	Access checks should operate within the normal ServiceNow transaction flow without unnecessary processing.
NFR-5	Availability	The access-control solution should be available whenever the ServiceNow application and relevant table are available.
NFR-6	Scalability	The ACL approach should be extendable to additional branches, roles, tables and

		access conditions.
--	--	--------------------

Requirement Summary: The solution must provide secure, role-controlled and Branch-aware access to Institution Details records while preserving administrator full access.
