

ACCEPTANCE TESTING – UAT EXECUTION & REPORT SUBMISSION

Date	29 september 2026
Team ID	6ab800af30f9767f87729b97
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

1. Purpose of Document

This document briefly explains the test coverage and open issues of the Script-Controlled ACL project at the time of release to User Acceptance Testing (UAT). The focus is on validating record access according to configured roles, Branch conditions, and administrator access.

2. Defect Analysis

Record the number of defects identified during UAT by resolution and severity. The supplied template uses resolution categories such as By Design, Duplicate, External, Fixed, Not Reproduced, Skipped, and Won't Fix. No defect counts are pre-filled because actual UAT execution results were not supplied.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	To be recorded	To be recorded	To be recorded	To be recorded	To be recorded
Duplicate	To be recorded	To be recorded	To be recorded	To be recorded	To be recorded
External	To be recorded	To be recorded	To be recorded	To be recorded	To be recorded
Fixed	To be recorded	To be recorded	To be recorded	To be recorded	To be recorded
Not Reproduced	To be recorded	To be recorded	To be recorded	To be recorded	To be recorded
Skipped	To be recorded	To be recorded	To be recorded	To be recorded	To be recorded
Won't Fix	To be recorded	To be recorded	To be recorded	To be recorded	To be recorded
Totals	To be recorded	To be recorded	To be recorded	To be recorded	To be recorded

3. Test Case Analysis

This section records the number of UAT test cases that passed, failed, or remain untested. Counts must be completed after execution.

Section	Total Cases	Not Tested	Fail	Pass
READ Access	3	To be recorded	To be recorded	To be recorded
CREATE Access	2	To be recorded	To be recorded	To be recorded

WRITE Access	2	To be recorded	To be recorded	To be recorded
DELETE Access	2	To be recorded	To be recorded	To be recorded
Security / ACL Enforcement	2	To be recorded	To be recorded	To be recorded
Administrator Access	1	To be recorded	To be recorded	To be recorded

4. UAT Coverage Summary

- Positive scenarios: authorized users can perform the actions allowed by their assigned ACL roles.
- Negative scenarios: users without the required permission are prevented from the corresponding action.
- READ testing includes Branch and role-based access behaviour.
- CREATE, WRITE and DELETE testing validates bb2, bb3 and bb4 permissions respectively.
- Administrator access is validated separately.

5. Open Issues / Exceptions

Issue ID	Description	Severity	Status	Action / Remarks
EX-001	To be recorded if an exception is identified during UAT.	To be recorded	Open / In Progress / Closed	To be recorded
EX-002	To be recorded if an exception is identified during UAT.	To be recorded	Open / In Progress / Closed	To be recorded
EX-003	To be recorded if an exception is identified during UAT.	To be recorded	Open / In Progress / Closed	To be recorded

6. Final Report Output

Final UAT outcome should be completed from the executed test cases and defect analysis. Do not mark a test as Pass or Fail without execution evidence.

7. Version Control

Version	Date	Change Description	Prepared By
1.0	28 September 2026	Initial UAT execution and report submission	ASWIN J C
1.1	28 September 2026	Post-UAT corrections / updates, if required	ANTON VIJU J V

Note: The source template provides example defect and test-case counts. Those example values have intentionally not been copied into this project report; actual project results must be entered after UAT execution.
